 - section
 - nav
 - article
 - **aside**
 - h1, h2, h3, h4, h5, and h6
 - hgroup
 - header
 - footer
 - address

<aside>

The <aside> element represents a section of a page that consists of content that is tangentially related to the content around the aside element, and which could be considered separate from that content.

Point

- Example of contents
 - pull quotes
 - sidebars
 - advertising
 - groups of nav elements

etc. Other content that is considered separate from the main content of the page. [Example A]

HTML Attributes

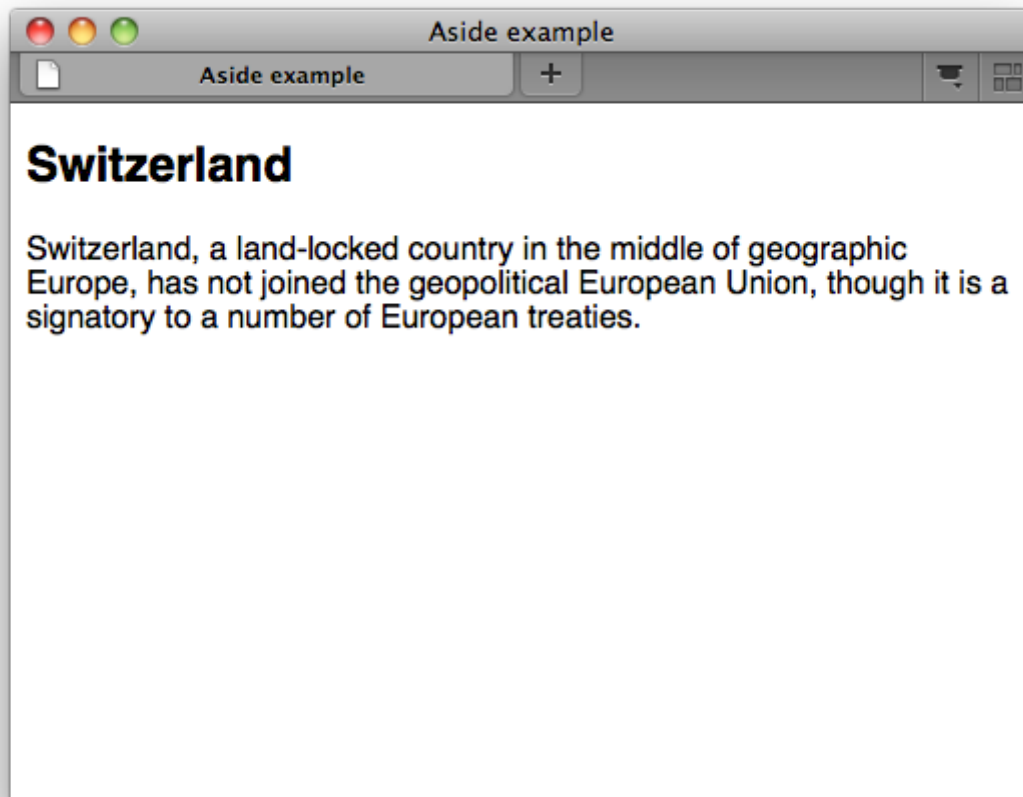

See global attributes.

Examples

Example A

The following example shows how an aside is used to mark up background material on Switzerland in a much longer news story on Europe [try it]:

```
<aside>
<h1>Switzerland</h1>
<p>Switzerland, a land-locked country in the middle of geographic Europe,
has not joined the geopolitical European Union,
though it is a signatory to a number of European treaties.</p>
</aside>
```

HTML Reference

The HTML5 specification defines the `<aside>` element in 4.4.5 The aside element (<http://www.w3.org/TR/html5/semantics.html#the-aside-element>).
