  - 1.3 HTML Reference
  - 1.4 See also

## <div>

The <div> element has no special meaning at all.

## Point

- It can be used with the class, lang, and title attributes to mark up semantics common to a group of consecutive elements.
- When no other element is suitable, the <div> element is used as an element of last resort. Otherwise, it leads to poor accessibility for reader.

## HTML Attributes

See global attributes.

## HTML Reference

The HTML5 specification defines the <div> element in 4.5.13 The div element (<http://www.w3.org/TR/html5/grouping-content.html#the-div-element>).
